

Health AI – Intelligent Healthcare Assistant

1. Introduction

Project Title: Health AI – Intelligent Healthcare Assistant

Team ID: NM2025TMID01491

Team Leader: R.Sri Mathi – saroja.saroja58556@gmail.com

Team Members:

1. A. Nivetha – rosenivetha911@gmail.com
2. E. Vishalachi – vvisa088@gmail.com
3. R. Pooja – baburamesh490490@gmail.com

2. Project Overview

Purpose: Health AI offers intelligent and easy-to-understand healthcare assistance by leveraging the IBM Granite model. It enables features such as Patient Chat, Disease Prediction, and Treatment Plans for better medical guidance.

Features:

- Patient Chat Interface
- Disease Prediction System
- Treatment Plan Recommendations
- Integration with IBM Granite Model
- Secure Deployment in Google Colab

3. Architecture

Frontend: Gradio for interactive UI

Backend: Python (Transformers and Torch Libraries)

Model: IBM Granite Model from Hugging Face

Deployment: Google Colab with T4 GPU

4. Setup Instructions

Prerequisites:

- Python (3.x)
- Git
- Gradio Framework
- IBM Granite Model (via Hugging Face)
- Google Colab Access

Installation Steps:

1. Clone the repository (if applicable):
git clone [Repository URL]
2. Install required libraries:
pip install transformers torch gradio -q
3. Open Google Colab, change Runtime Type to T4 GPU.

5. Folder Structure

```
HealthAI/ |-- colab_notebook.ipynb # Main Google Colab Notebook
                  |-- model_integration.py #
```

```
Code for model interaction |-- utils.py # Helper functions |-- requirements.txt # Required Python packages
```

6. Running the Application

1. Open Google Colab: <https://colab.research.google.com/>
2. Set Runtime to T4 GPU
3. Run the initial cell to install dependencies:
!pip install transformers torch gradio -q
4. Upload and run the project code cells sequentially.

7. API Documentation

The project runs entirely in Google Colab without separate REST APIs. Interaction occurs through the Gradio web interface.

8. Authentication

No explicit authentication mechanism. The model runs locally in Google Colab and is accessed through Gradio's interface.

9. User Interface

- Landing Page with Gradio Interface
- Chat Window for Patient Interaction
- Prediction Output Section
- Treatment Plan Recommendations

10. Testing

- Manual Testing through the Gradio Interface
- Sample Inputs:
 - Symptoms for disease prediction
 - Query for treatment plans

11. Known Issues

- Performance depends on Google Colab session time limits
- Occasional loading delays when model is first initialized

12. Future Enhancements

- Add Authentication System for User Tracking
- Build a Dedicated Web Interface
- Expand Database for Disease & Treatment Knowledge
- Deploy on Cloud Infrastructure for Scalability

13. Screenshots or Demo

[Provide screenshots of the Gradio interface and sample outputs]

The screenshot shows a web browser window with the address bar containing "google.com/search?q=google+colab&rlz=1C1JTC_enIN1103IN1108&oq=google+colab&gs_lcrp=EgZjaHjbWUqEwgBEAAgYgwEYkQIySQMVgAQYigUyBggAEUYOTITCA...". The search term "google colab" is entered in the search bar. The results page is dark-themed, featuring a prominent "Google Colab" result from "https://colab.research.google.com". Below it, there are three main sections: "Jupyter.ipynb", "Run in Google Colab", and "Pro". A "Activate Windows" banner is visible on the right side.

The screenshot shows the "Welcome To Colab!" page from "colab.research.google.com". The left sidebar has a "File" menu open, showing options like "New notebook in Drive", "Open notebook", "Upload notebook", "Save", "Download", and "Print". The main content area displays a "Welcome to Colab!" message, information about "Access Popular LLMs via Google-Colab-AI Without an API Key", and a code snippet demonstrating AI generation:

```
from google.colab import ai
response = ai.generate_text("What is the capital of France?")
print(response)
```

Below this, there's a section titled "Explore the Gemini API" with a "How to get started?" link. A "Activate Windows" banner is also present at the bottom right.

Disease Prediction Treatment Plans

Enter Symptoms
fever

Analyze Symptoms

Possible Conditions & Recommendations

- **Intravenous fluids** based on the suspected cause of the infection.
- Fluid and electrolyte replacement to manage shock.
- Monitoring and supportive care.

5. **Bacterial or viral meningitis:**

- **Description:** Inflammation of the membranes surrounding the brain and spinal cord, often accompanied by fever, severe headache, neck stiffness, and rash.
- **General Medication Recommendations:**
 - Antibiotics for viral meningitis are generally not effective, but antivirals may be used if suspected.
 - Antibiotics for bacterial meningitis, such as ceftriaxone or cefotaxime.
 - Corticosteroids may be administered to reduce brain swelling and mortality in some cases.

Conclusion:

While these medical conditions can present with fever, it's crucial to remember that only a doctor can accurately diagnose the underlying cause and recommend appropriate treatment. Do not self-medicate or alter your treatment plan without professional medical advice. Always consult a healthcare provider for proper diagnosis and management of your symptoms.

The screenshot shows a web-based medical AI application. At the top, there are several browser tabs: 'Student', 'ibm-granite/granite-3.3-2b-inst', 'Health AI - Colab', and 'Gradio'. The main page title is 'Medical AI Assistant'. A disclaimer at the top states: 'Disclaimer: This is for informational purposes only. Always consult healthcare professionals for medical advice.' Below the disclaimer, there are two navigation links: 'Disease Prediction' (which is underlined in orange) and 'Treatment Plans'. On the left side, there is a text input field labeled 'Enter Symptoms' containing the word 'fever'. Below this input field is a large blue button labeled 'Analyze Symptoms'. To the right of the input field, there is a detailed response area. At the top of this area, it says 'Possible Conditions & Recommendations'. It lists three items: 'Intravenous fluids' (based on suspected cause), 'Fluid and electrolyte replacement to manage shock', and 'Monitoring and supportive care'. Below this, there is a section titled '5. **Bacterial or viral meningitis:**' which includes a description of the condition, general medication recommendations (mentioning antibiotics and corticosteroids), and a note about the effectiveness of antibiotics for viral meningitis. At the bottom of the response area, there is a 'Conclusion' section that emphasizes the importance of consulting a healthcare provider for proper diagnosis and treatment. There are also links to 'Go to Settings' and 'Activate WPS Office' at the bottom right.
